

TUBBS[®]
SNOWSHOES

The Original American Snowshoe

Fall/Winter 23/24

BRAND OVERVIEW

Founded in 1906, Tubbs is longest-standing snowshoe brand in the world. Our experience, innovation and craftsmanship have guided thousands of people on their winter adventures. Using the latest technology, we strive to build upon this legacy and inspire confidence in the everyday adventurer. No matter what path your journey leads you down, rest assured Tubbs will be ready to take you there.

Mission: To make the highest-quality snowshoeing equipment for everyday exploration in the outdoors.

Vision: To provide reliability and comfort to all those that journey on snow.

ANATOMY OF A SNOWSHOE

TUBULAR SNOWSHOES

Tubbs traditional tubular snowshoes are a great option for those looking to explore all the winter landscape has to offer. The soft step of aluminum frames offers a quiet experience for nature lovers and people looking to get away from it all. With a variety of sizes and traction options, everyone can find the right fit to stay on top of the freshly fallen snow. Whether you are searching for a mountain adventure or something to cruise around the local trails, there is a tubular snowshoe for your.

FLOTATION

1 FRAME

Durable 6000 Series aluminum frames are used on all tubular snowshoes to ensure maximum in-field dependability. Every frame has a tapered tail to optimize maneuverability and float.

ARTICULATION

2 ARTICULATION

From our R2 Revolution Response, Rotation Toe Cord and Fixed Toe Cord pivot systems, we have you covered for any variety of terrain.

CONTROL

3 BINDING

Our binding designs are constantly evolving to improve stability, control and comfort across all categories, each designed for specific trail needs.

4 HEEL LIFT

All Backcountry and Day Hiking snowshoes come with a heel lift to help you get uphill more efficiently and reduce calf strain.

TRACTION

5 TOE CRAMPON

Designed to make you sure-footed on your trail of choice.

6 HEEL CRAMPON

Provides additional grip and serves as a brake to prevent you from sliding backwards.

ANATOMY OF A SNOWSHOE

FLEX SNOWSHOES

Created to optimize traction, biomechanics and comfort, the FLEX Series offers a modern take on snowshoes. Choose a FLEX snowshoe when traction is the priority! Perfect for the summer hiker looking to extend their season and tackle their favorite trails, when the snow starts falling.

FLOTATION

1 FLEX DECK

Our advanced deck designs adapt to a variety of snow conditions underfoot. The Flex Deck allows torsional articulation throughout the body of the snowshoe, maximizing comfort and traction on uneven terrain.

2 FLEX TAIL™

The patented FLEX Tail™ technology allows the snowshoes to roll naturally underfoot, from heel strike to toe off. Absorbing shock from initial heel impact the FLEX Tail™ reduces the amount of stress on ankles, knees and hips.

ARTICULATION

3 ARTICULATION

Our Rotation Toe Cord with Rotation Limiter, and Fixed Toe Cord pivot systems have you covered for any variety of terrain and snow conditions.

CONTROL

4 BINDING

Our binding designs are constantly evolving to improve stability, control and comfort across all categories, each designed for specific trail needs.

5 HEEL LIFT

All Backcountry and Day Hiking snowshoes come with a heel lift to help you get uphill more efficiently and reduce calf strain.

TRACTION

6 CRAMPON

Designed to make you sure-footed on your trail of choice.

7 TRACTION RAILS

Traction Rails on all FLEX Series snowshoes ensure superior side-hill grip in hard-packed and icy conditions.

F.A.C.T. PLATFORM

The elements we account for when creating our snowshoes are F.A.C.T. : Flotation, Articulation, Control and Traction. These four elements are key in constructing a functional, high quality snowshoe.

FLOTATION

Their ability to float on top of the snow is the number one benefit of snowshoes. Tubbs designs snowshoe decks to increase your movement efficiency by reducing the amount you sink into the snow with each step. We've developed various types of decks in multiple sizes to optimize fit and maneuverability.

ARTICULATION

The action of a snowshoe's articulation is felt with every stride. It is the pivoting technology where the binding attaches to the frame of the snowshoe. We strive to design and develop articulation systems that promote a natural, flowing gait.

CONTROL

The control a user has over the snowshoe is a product of how their footwear interacts with the binding. This aspect is crucial in providing a safe, fun experience on the trails. Our bindings are engineered and tested to ensure maximum security, comfort and ease-of-use.

TRACTION

Traction needs vary widely with snow and trail conditions. It is imperative that we take this into consideration with every snowshoe design. Our traction rails and crampons are engineered to provide the necessary grip for the locations and conditions of primary use.

SNOWSHOE CATEGORIES

We categorize snowshoeing into three different disciplines for the variety of terrain and snow conditions on which we travel.

BACKCOUNTRY

Designed to break trails and get you to the peak, the Backcountry category offers our most aggressive traction without sacrificing comfort and control.

DAY HIKING

The snowshoes in the Day Hiking category are crafted to “do-it-all”. From uphill climbing in deep powder to cruising a hard-packed path, these snowshoes fit the bill for all your winter journeys.

TRAIL WALKING

Designed to carry you over level terrain and packed snow, the Trail Walking category is perfect for beginning snowshoers or seasoned hikers looking to take in a full day on the trails.

NEW! ECLIPSE SERIES

Introducing the **Eclipse** snowshoe. It's simple design practicality for the beginner snowshoer and the entire family, for a fun day out on the snow. The Eclipse is built around the Torsion Deck™ and features rail pins which enhances traction, preserves your natural gait, and supports comfort when the terrain becomes uneven. The Eclipse's intuitive Quickstrap™ binding is easy to use and holds securely over the top of your foot and heel to keep you locked in. The Eclipse's intuitive Quickstrap™ binding is easy to use and holds securely over the top of your foot and heel to keep you locked in. The Eclipse straight forward sizing system takes the difficulty out of finding the perfect fit, just choose from three different sizes based on your boot size. After a full day of adventure, storing is made simple with our EZ-Stack™ decking design which allows up to four pairs to lock together. The Eclipse is as functional as it is practical.

Available Sizes: Large, Medium, Small
Weight/Pair: 2.8 lbs / 1.27 kgs (Medium)
