

TENT LIVABILITY

Marmot has always set the standard for tent livability in the industry. By using Tent Topography and separating the living space into zones, we better inform our customers so they can choose the best Marmot tents for their needs. Coupled with CAD data comparisons, we give customers a better idea of tent volume without the need of setting it up. **Zone Construction** optimizes the **Sleep, Body** and **Head** zones, making them more comfortable in size and configuration for users.

Tent Topography is the tool that helps us visualize how much more room there is in each zone. We also have calculated the area in these zones using detailed measurements and CAD models.

VISUALIZING TENT LIVABILITY: **TENT TOPOGRAPHY**

MARMOT TUNGSTEN 2P

- **4.5 times more headroom**
- more than **7 in (18 cm)** longer sleep zone

STANDARD X-FRAME 2P

- same footprint and peak height
